

# ENVIRONMENTAL POLICY

For BTS Befestigungselemente-Technik GmbH, Saarburg/Germany, profitability and protection of the environment are important principles of company's policy.

Constant improvement in environmental protection is achieved by:

- Promoting awareness of environmental issues through regular training of all employees.
- Evaluation and control of the company's existing and future products and activities for their environmental impact. By using the best available technology and employee awareness, harmful environmental effects will be either avoided or reduced to the lowest possible level.
- Collecting, documenting and evaluating relevant environmental data through our environmental management system. Internal and external audits monitor compliance with the company's environmental policy, with environmental law and realisation of environmental goals. All necessary steps will be taken to avoid accidental emissions of materials or energy.
- Maintaining open dialogue with all relevant authorities and other institutions. The public receives all the information that is necessary to understand the environmental impact, caused by BTS GmbH activities, through the publication of our environmental declaration.

Ensuring that our customers, suppliers and contractors, working on BTS GmbH premises, will be informed of our environmental requirements in an adequate manner.

Through the introduction of our environmental management system we are in a better position to express, to all concerned, steps taken for environmental protection. We can also continuously improve our contribution to environmental protection by objective-driven steps.
